

Data Warehouse Architect

Next Tier Concepts, Inc is actively looking for a Data Warehouse Architect to assist in development of a major Data Warehouse application. Qualified candidates will have a minimum of 3 years experience in an operational Data Warehouse environment. Candidates will be required to utilize IBM Information Server (formerly Ascential DataStage) in combination with complex Oracle transactional systems and a Netezza data warehouse appliance to maintain, design, develop, test, implement and document ETL solutions. [introductory paragraph]

Required Skills

The position requires building strong partnerships with cross functional teams across the organization. This position will manage all phases of the lifecycle and interface with the parties participating in each phase. Candidates should have a thorough understanding of diverse IT environments and the business requirements driving it.

- Bachelor's degree in computer sciences or engineering-related discipline
- 3 years of experience in a Data Warehousing environments
- General knowledge of Business Intelligence or Data Warehouse concepts is a must
- Solid understanding of Entity-Relationship and Dimensional modeling and OLAP
- Solid understanding of Software Development Life Cycle or equivalent methodology
- Hands on experience with large-scale data load, unload, backup and recovery procedures
- Expert SQL skills
- ETL: Ascential (DataStage, ProfileStage, QualityStage); Informatica or other ETL tool experience also considered
- ETL: Understanding of Partitioning, Parallel Processing, and Job Organization
- ETL: Experience coding custom stages is a plus
- Database: Oracle
- Data Modeling: 3 years data modeling experience developing logical and physical models (i.e. ERWin, Visio, etc)
- Understanding of Unix operating environment and shell scripting desirable
- Strong leadership, verbal and written communication skills
- Excellent interpersonal and organizational skills
- Project management ability

Desired Skills

- Bachelor's degree in computer sciences or engineering-related discipline
- Experience with Netezza Data Warehouse Appliance
- Experience with financial accounting systems (i.e. general ledger)
- Experience with Federal Government IT projects
- Familiarity with Army organization, systems, and processes
- Experience working in a CMM/CMMI level 2 or above environment
