

Geospatial System Engineer

Next Tier Concepts, Inc. is a small business located in Vienna, VA specializing in geospatial solutions, custom software development, and eLearning. As our organization continues to grow, we have an immediate availability for an experienced individual to fill a full time Geospatial System Engineer position.

Desired Qualifications

- Experience with Google Earth Enterprise (including Fusion and Server software)
- Experience with Geospatial Data Format (including imagery, terrain, and vector types)
- Experience with various Geospatial / Imagery software packages (ESRI, MapInfo, ERDAS)
- Experience with Linux Operating System
- Comfortable making presentations and teaching in front of a small group of people
- Willing to travel
- Must be a US Citizen
- Ability to obtain a security clearance
- Comfortable with hardware configuration
- Experience writing shell scripts

Responsibilities

- Assist coordinating, installing, and implementing Google Earth Globes and Fusion for a variety of government and commercial customers.
- Conduct technical and end-user training as part of the deployment process.
- Support the Geospatial Solutions department with other geospatial/Google-related activities as needed, for example providing capabilities demos and attending industry events.
- This position will require moderate travel.

Requirements

Citizenship	US Citizen
Security Clearance	No
Job Location	Vienna, VA
Duration	Full Time
Start Date	Immediately
Travel	< 5 %

How to Apply

Email your resume (including references and salary requirements) in MS Word or Adobe Acrobat format to jobs@ntconcepts.com. Please mention Job Code CP001 in your cover letter.
