

## Junior Data Warehouse Operations Engineer

Next Tier Concepts, Inc. is seeking a Junior Data Warehouse Operations Engineer who will support the Operations and Management team for a complex enterprise data warehouse environment involving Business Objects, Oracle, Netezza, and IBM DataStage technology. This person will work to fulfill daily obligations for monitoring of the nightly warehouse processes and procedures. They will also need to provide support to the end users by fielding help desk tickets and answering calls as well as escalating issues when need be. The successful candidate will have experience dealing with level 1 hardware and support issues.

### Required Skills

- Recent BS degree in technical and/or business field
- 1 to 2 years technical help desk support experience
- Strong technical and analytical skills
- Ability to work in small teams or as a part of a larger team
- Excellent written and oral communication skills
- Experience with MS Windows
- Ability to use and navigate Windows Software
- US Citizenship required
- Applicant must have or be able to procure security clearance

### Desired Skills

- Unix or Linux Administration
- Prior consulting experience
- Experience working with US Government customers
