

GIS Programmer/Developer

Next Tier Concepts, Inc. is actively looking for an experienced programmer developer familiar with software engineering for Geographic Information Systems (GIS) programming using Esri and Google Maps application programmer interfaces.

Job Summary:

This position will be based in the Washington DC area. The role will include working as a team with software engineers and geospatial data engineers to tackle challenging issues and improve existing processes. As a GIS Programmer/Developer, you should have experience developing, deploying and maintaining web based mapping applications that integrate Esri and Google Maps.

Skills/Qualifications:

- Demonstrated experience developing geospatial products from common, web-based geo-applications (Esri, Google Earth, Google Maps, etc.);
- Proficiency with HTML, JavaScript,, and CSS3;
- Google Maps API development and integration experience;
- Web server configuration and administration capabilities including Microsoft Internet Information Server (IIS);
- Experience working with spatial data and common geospatial file formats;
- Familiar with Open Geospatial Consortium (OGC) formats for web mapping services;
- Experience/Familiarity with Esri ArcGIS Server;
- Microsoft SQL Server experience;
- Microsoft .Net Framework;
- Strong attention to detail to ensure products adhere to strict accuracy and quality specifications;
- Ability to work with minimal guidance, prioritize work, and handle multiple tasks under tight deadlines;
- Strong interpersonal skills and manage client relationships necessary (will be a primary customer interface).

Education/Experience:

- 3-5 years of experience with GIS programming and development
- Bachelor's Degree in Geography or Computer Sciences (or related field with "geospatial focus")
- Excellent Communication skills (will be a primary customer interface)
